

# Fuels and Fire Behavior Digital Dictionary

The Fire Behavior Assessment Team

Lion Fire  
Plot 10

7/21/2011  
Region 5/Sequoia NF

Plot 10, 0-50 ft, Pre

Plot 10, 0-50 ft, Post

## Fuels, Topography, Weather

| Site Info    |                |
|--------------|----------------|
| Veg Type     | Ponderosa pine |
| Slope (%)    | 15             |
| Aspect (deg) | 25             |
| Elev (ft)    | 6720           |

| Climatic Variables                        |                    |
|---|--------------------|
| Fire Arrival (Date, Time)                 | 7/21/11, 20:50     |
| Burn End (Date, Time)                     | 7/21/11,<br>21.28+ |
| 20ft Wind, 10min avg./gusts (mph)         | 3/4                |
| Onsite wind, eyelevel (10 sec mean) (mph) | Failed sensor      |
| Wind direction (azimuth)                  | 300                |
| RH (%)                                    | 39                 |
| Temp (F)                                  | 53                 |
| ERC/BI                                    | 38/27              |
| Drought Index                             | n/a                |
| Live FM % (Herb/Woody)                    | 191/199            |
| Live FM % taken onsite (woody)            | 55                 |
| 100/1000hr Dead FM% (measured onsite)     | 7/13               |
| Dead FM% (1/10/100/1000hr)                | 11/9/12/15         |

| Fuel Model (low/high) |
|-----------------------|
| 161/188               |

| Surface Fuels - Pre | Tons/ac |
|---------------------|---------|
| 1-hour              | 0.2     |
| 10-hour             | 0.3     |
| 100-hour            | 1.0     |
| 1000-hour           | n/a     |
| Litter              | 3.4     |
| Duff                | 16.7    |
| Total Fuels         | 21.6    |

| Understory Veg.      | Tons/ac     |
|----------------------|-------------|
| Live/Dead Shrub      | 6.75 / 1.96 |
| Live/Dead Herbaceous | <0.01       |

| Canopy & Stand                           |      |
|--|------|
| Canopy Bulk Density (kg/m <sup>3</sup> ) | 0.03 |
| Canopy Base Height (ft)                  | 17   |
| Basal Area (ft <sup>2</sup> /ac)         | 163  |
| Overstory Trees/ac                       | 569  |

### Climatic Variable Details

Weather and fuel moisture taken from the Peppermint RAWS using NFDRS2016. Woody fuel moisture, 100hr, and 1000hr also taken at site. ERC and BI are scores, not percentiles.

Site History: This plot was in the Golden Trout Wilderness, with no known fire history at the plot sites.

## Fire Behavior

| Fire Behavior                                 |            |
|---|------------|
| Primary Fire Type                             | Surface    |
| Secondary Fire Type                           | n/a        |
| ROS - sensor source (ch/hr)<br>(min/max/avg.) | 1.4        |
| ROS - video interp. (ch/hr)<br>(min/max/avg.) | 1 to 2     |
| Flame Length (ft) (min/max)                   | 1 to 2     |
| Direction Fire Spread is<br>going (azimuth)   | 360 to 315 |

| Fire Video | Description |
|------------|-------------|
|            | n/a         |
|            |             |
|            |             |

Fire management actions affecting plot:  
burnout operation

## Fire Effects

| Fire Severity              |     |
|----------------------------|-----|
| Substrate Score (1-5)      | 2.9 |
| Understory Veg Score (1-5) | 2.1 |
| Avg. % tree canopy scorch  | 57  |
| Avg. % tree canopy torch   | 3   |
| Avg. tree bole char (ft)   | n/a |

| Fuel Consumption | %    |
|------------------|------|
| 1-hour           | -174 |
| 10-hour          | -33  |
| 100-hour         | 100  |
| 1000-hour        | n/a  |
| Litter           | 76   |
| Duff             | 100  |

Severity category definitions: 1= unburned, 2=low, 3=moderate, 4=high, 5=very high

Lion Fire, Plot 10, 2011

# About the Fire Behavior Assessment Team (FBAT)

## Abstract

Despite the scope of the US wildfire problem, capabilities for monitoring active wildfires to answer pressing questions about fire behavior and personnel safety are severely limited. The **Fire Behavior Assessment Team (FBAT)** is the only team currently collecting [applied science data on active wildfires](#). FBAT functions in collaboration with land managers and interested research groups. In coordination with incident management, sites are placed opportunistically ahead of the fire accounting for current and expected fire behavior, safe access, and fire management tactics.

FBAT can collect standard weather, fire behavior and fire severity observations as well as set up dataloggers which store wind speed, direction, temperature and RH. FBAT can also take plot data which includes:

- Heat resistant fire behavior equipment left on-site (video camera, 5-foot anemometer, sensor array for rate of spread/temperature profile through time, heat flux sensor).
- Fuels data collected on canopy, surface and ground fuels before and after the fire, and fire severity assessment post-fire. Fuel moisture data is often collected prior to the fire.

More information about methods and data can be found on the FBAT website:

<https://www.frames.gov/fbat/home>

The report for this fire which includes field methods and other background can be found at:
