IFT-DSS Phase III May 2009 – May 2010

- The Software Tools and Systems Study – John Cissel
- Phase III Accomplishments – Tami Funk
- IFT-DSS version 0.3.0 Demonstration – Tami Funk
- IFT-DSS Phase IV – Tami Funk/John Cissel
- The Emerging Vision for Fire Software Systems - Mike Rauscher
- The Human Framework around IFT-DSS – Mike Rauscher
- Questions and Discussion

Phase III Accomplishments - Overview

- IFT-DSS overall strategic objectives
- Phase III accomplishments
 - Summary of Phase III activities
 - Software development process
 - Test user group
 - Proof of concept objectives
 - Proof of concept demonstration
- Next steps – Phase IV

IFT-DSS Overall Strategic Objectives (1 of 2)

Make fuels treatment planning easier

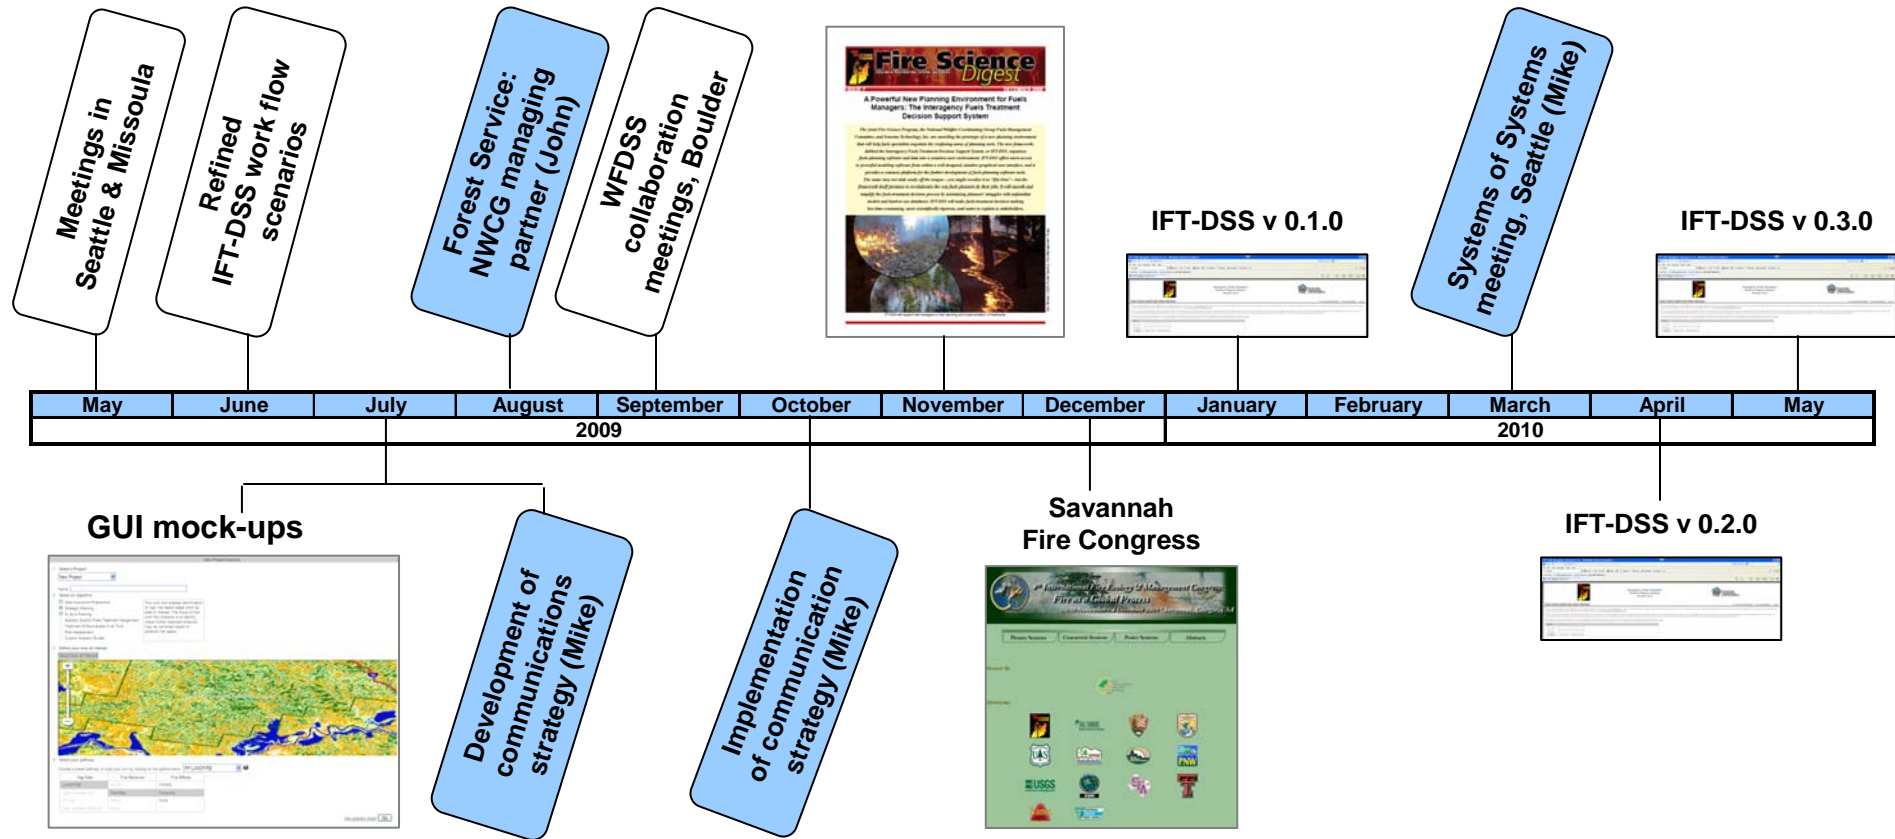

- Allow users to acquire, create, and transform input data easily
- Provide data choices: treelist, LANDFIRE grids, user-supplied data
- Allow users to view and edit spatial and tabular data (inputs and outputs)
- Organize fuels treatment planning analysis steps and software tools

IFT-DSS Overall Strategic Objectives (2 of 2)

Make fuels treatment planning more scientifically robust

- Provide guidance regarding data and model choices based on the scale and type of analysis performed
- Allow users to publish and share analysis methods and algorithms
- Supply a mechanism to easily incorporate new models and tools as they are developed
- Provide quality control, documentation, and audit-trail information to meet regulatory reporting requirements

IFT-DSS Phase III Accomplishments

Meetings in Seattle and Missoula

Purpose: Meetings with research model developers to discuss software development approach and gain support for collaboration

Outcome:

- Fire and Environmental Research Applications (FERA) team will modularize applications for integration in larger systems
- Missoula fire lab will develop and share code library of models/modules
- Reinhardt and Dickinson independently publish a paper confirming the IFT-DSS vision¹

¹*First-Order Fire Effects Models for Land Management: Overview and Issues*; Fire Ecology 6(1):2010

Refined Work Flow Scenarios (1 of 2)

Purpose: Confirm and clarify the problem-solving needs of the fuels treatment planning community

Seven steps in the decision support process:

- 1) Define project, vegetation, landscape, and scale
- 2) Prepare and ensure quality of vegetation data
- 3) Simulate and analyze fire behavior
- 4) Analyze fire effects and/or fire risk
- 5) Design treatment strategies
- 6) Simulate treated vegetation as well as geophysical and fuel conditions
- 7) Simulate treatment effectiveness in reducing fire behavior and fire effects potentials

Refined Work Flow Scenarios (2 of 2)

Outcome: Seven work flow scenarios for implementation in IFT-DSS

Includes:

- Data acquisition and preparation
- ★ Strategic planning
- Spatially explicit fuels treatment assignment
- Fuels treatment over time
- ★ Prescribed burn planning
- Risk assessment
- User-defined (custom)

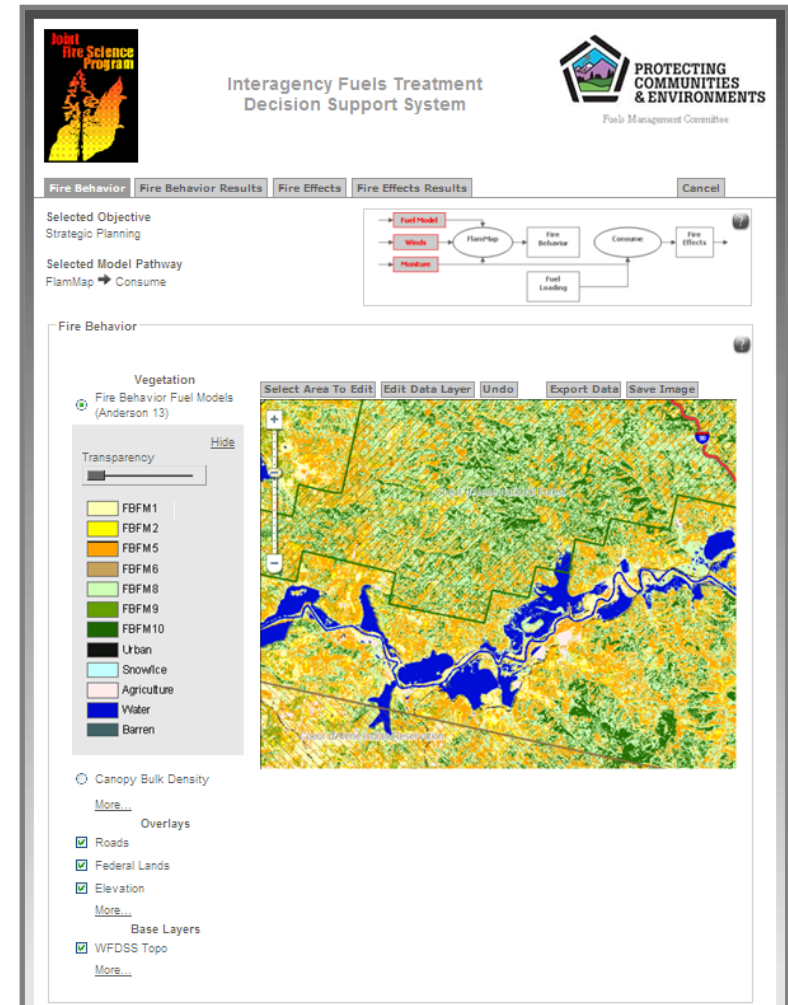

Refined Work Flow Scenarios and Proposed Proof of Concept System Functionality for the IFT-DSS; Drury et al., 2009

GUI Mock-ups and Software Design

Purpose: Share design ideas with the test user community and obtain feedback early

Outcome: Confirmation of design vision

WFDSS Collaboration Meetings

Purpose: Identify how IFT-DSS and WFDSS can collaborate and share software services

Outcome: Identified several initial collaboration areas

- Sharing “look and feel” elements of WFDSS (e.g., map symbology)
- Sharing GIS map layers
- Future sharing of IFT-DSS modules for WFDSS fuels analysis
- The WFDSS project team assigned Mitchell Burgard as the liaison between WFDSS and IFT-DSS
- Discussions regarding collaboration continue among the major systems (WFDSS, BlueSky, and IFT-DSS)

A Powerful New Planning Environment for Fuels Managers: The Interagency Fuels Treatment Decision Support System

The Joint Fire Science Program, the National Wildfire Coordinating Group Fuels Management Committee, and Sonoma Technology, Inc. are unveiling the prototype of a new planning environment that will help fuels specialists negotiate the confusing array of planning tools. The new framework, dubbed the Interagency Fuels Treatment Decision Support System, or IFT-DSS, organizes fuel-planning software and data into a seamless user environment. IFT-DSS offers users access to powerful modeling software from within a well-designed, intuitive graphical user interface, and it provides a common platform for the further development of fuel-planning software tools. The name may not slide easily off the tongue—you might vocalize it as “Ify-Diss”—but the framework itself promises to revolutionize the way fuels planners do their jobs. It will smooth and simplify the fuel-treatment decision process by minimizing planners’ struggles with unfamiliar models and hard-to-use databases. IFT-DSS will make fuel-treatment decision making less time-consuming, more scientifically rigorous, and easier to explain to stakeholders.

STI, Sonoma Technology, Inc. and Sonoma Technology, Inc. are unveiling the prototype of a new planning environment that will help fuels specialists negotiate the confusing array of planning tools.

ABSTRACT

The Joint Fire Science Program (JFSP), acting in concert with the Fuels Management Committee (FMC), initiated the Software Tools and Systems (STS) Study in March 2007 to address the proliferation of decentralized software systems in the fuels treatment planning domain. A strategic assessment completed in March 2008 led to the development of a conceptual design to address the issue. Soon after, a software design for a service-oriented architecture (SOA) framework was developed for fuel-treatment planning. Both designs were developed under the guidance of an interagency team of fuel treatment planners and software system developers. The system, provisionally named the Interagency Fuels Treatment Decision Support System (IFT-DSS), will be released as a proof of concept in Spring 2010. The complete, fully functional system is scheduled to be in use for fuels treatment specialists by Spring 2012.

The IFT-DSS will provide one user interface that will enable command and control for pre-existing and newly developed software modules and data sets. It will support treatment sub-scale and landscape-scale analyses, provide data visualization, functionality, estimate of the behavior and first-order effects, and support quantitative risk assessments. It will also permit the use and integration of standardized and custom data sets. The IFT-DSS will allow fuels treatment analysis and planning to build custom analysis flow paths and store intermediate and final results for repeated analysis of alternative scenarios. The IFT-DSS is designed as a web-based, collaborative system that will enable scientific model developers to register their models and tools within the system as callable software services and make them available to IFT-DSS users. In the longer term, it is envisioned that the IFT-DSS will be interoperable with a small number of broad-based ecosystem SOA systems such as the Wildland Fire Decision Support System (WFDSS) and the BlueSky Framework. This poster explores the motivation for, functionality of, and vision behind the JFSP IFT-DSS project.

METHODS

The STS Study will be conducted in phases (described above) and Phase III of the STS Study is currently underway. The overall project objectives are to (1) develop and test a collaborative, SOA framework that can reduce the software chaos in the fuels and fuels domain and (2) deploy the SOA framework as a web-based decision support system for the fuels treatment domain.

RESULTS

DISCUSSION

ABSTRACT

The Software Tools and Systems Study was initiated by the Joint Fire Science Program and National Interagency Fuels Management Committee in March 2007 to address the proliferation of decentralized software systems in the fuels treatment planning domain. To address the proliferation of decentralized software systems in the fuels treatment planning domain, a strategic assessment was completed in March 2008. This led to the development of a conceptual design to address the issue. Soon after, a software design for a service-oriented architecture (SOA) framework was developed for fuel-treatment planning. Both designs were developed under the guidance of an interagency team of fuel treatment planners and software system developers. The system, provisionally named the Interagency Fuels Treatment Decision Support System (IFT-DSS), will be released as a proof of concept in Spring 2010. The complete, fully functional system is scheduled to be in use for fuels treatment specialists by Spring 2012.

ACCESS TO THE IFT-DSS

KEY RESULTS

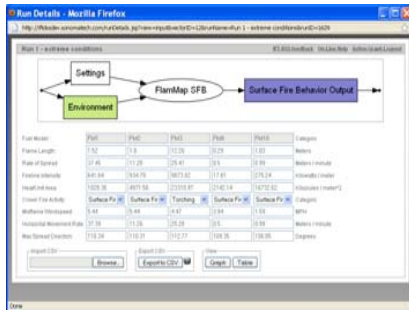

Software Development Process (1 of 3)

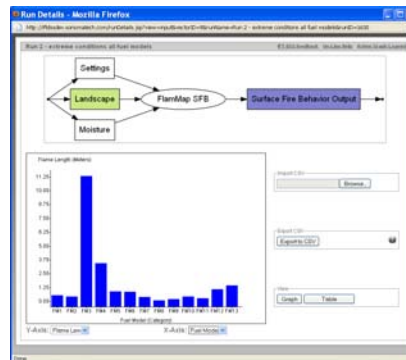

Agile – rapid prototyping approach

Methodology for software development based on iterative development, where objectives and solutions evolve through collaboration among cross-functional teams

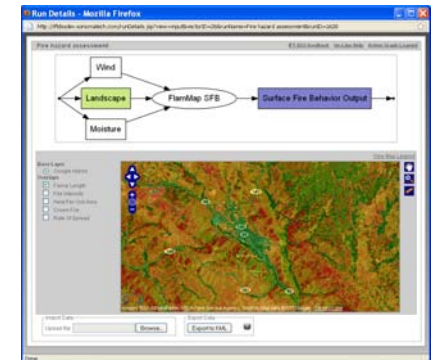

IFT-DSS v 0.1.0
(January 2009)

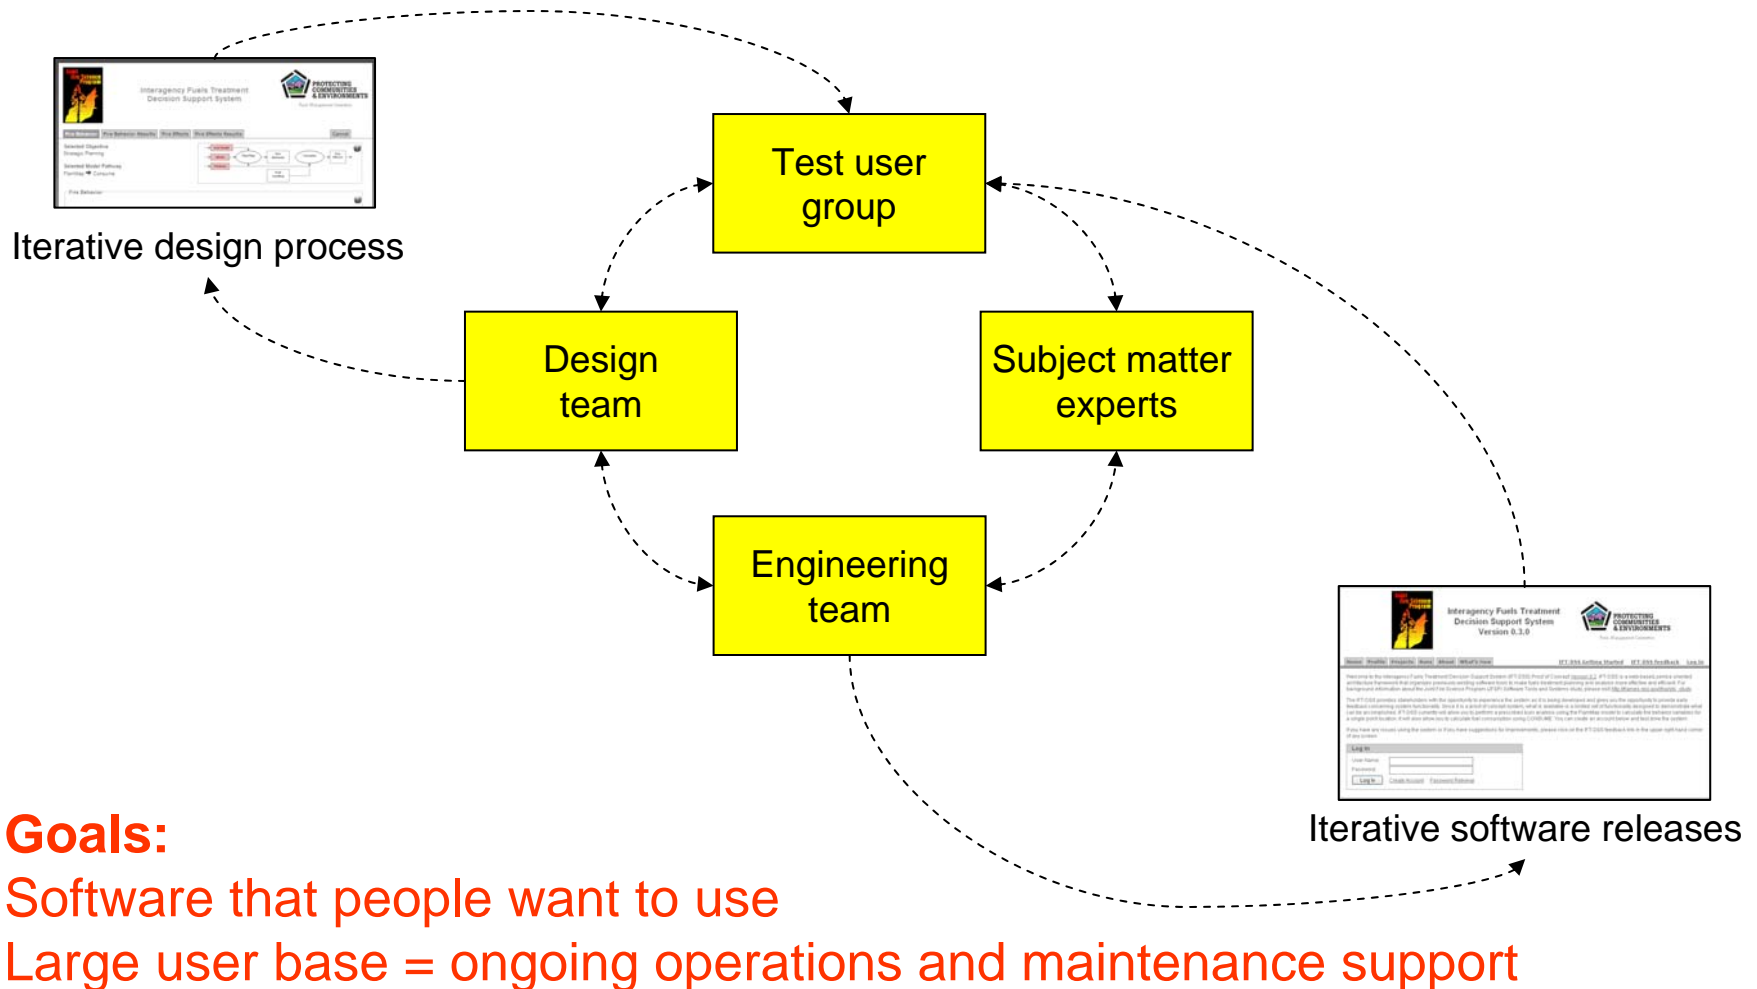

IFT-DSS v 0.2.0
(April 2010)

IFT-DSS v 0.3.0
(May 2010)

Software Development Process (2 of 3)

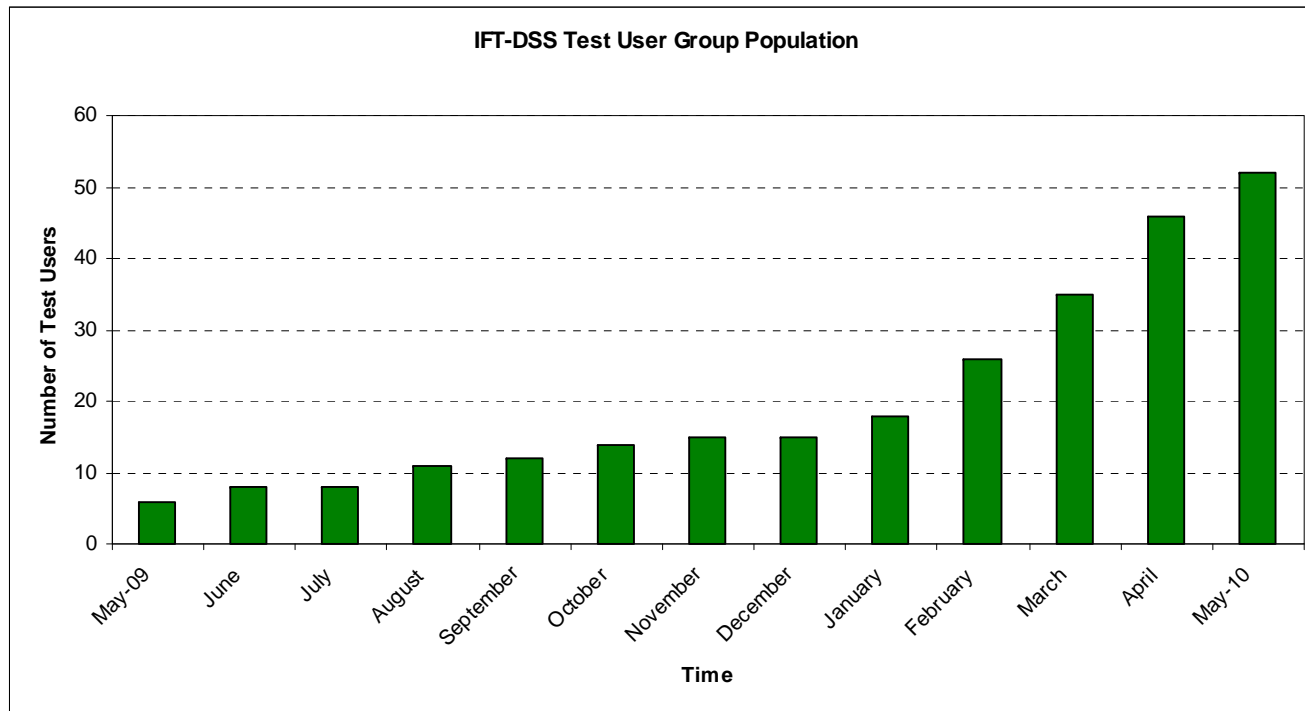

Software Development Process (3 of 3)

- Benefits
 - Engage user community early
 - Build user base in parallel with software development
 - Create software that people will want to use
- Critical elements
 - Active test user group
 - User feedback and response system
 - Strong team coordination

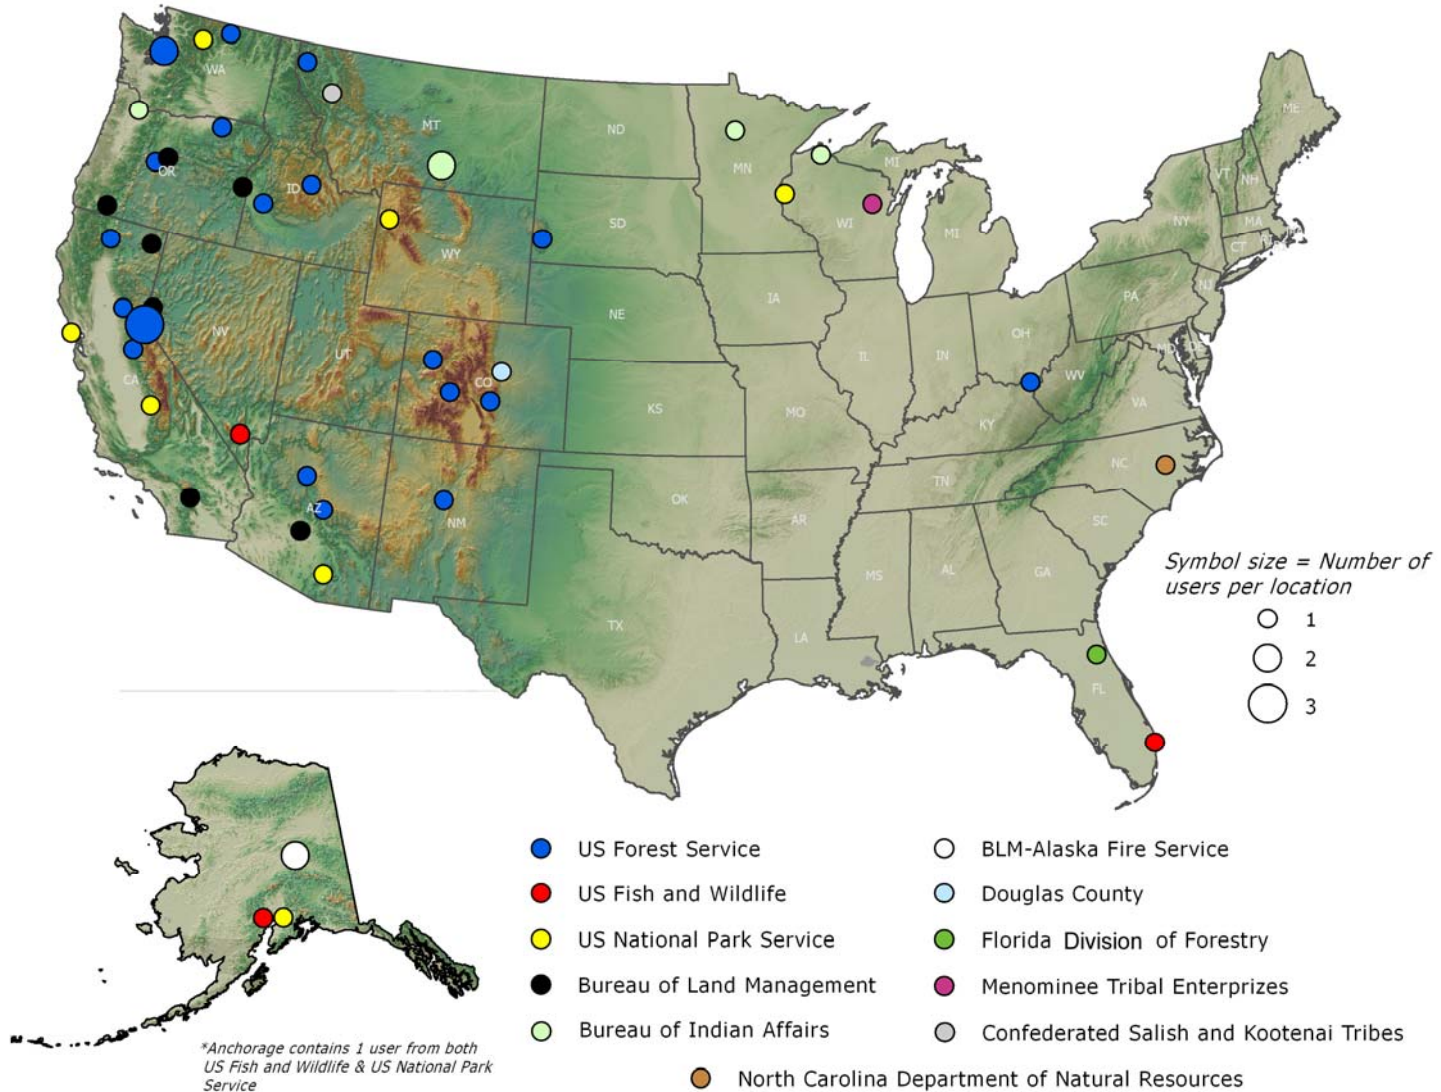

Test User Group (1 of 2)

Demographics

- Multi-agency representation
- Geographic representation

Test User Group (2 of 2)

Proof of Concept Objectives (1 of 2)

- Develop a framework to facilitate the fuels treatment decision support process
- Provide a user interface that is straightforward and easy to access
- Offer users software model choices within work flow scenarios
- Provide data choices

Proof of Concept Objectives (2 of 2)

- Support visualization and editing of spatial and tabular data
- Facilitate document preparation
- Support analytical collaboration
- Connect with other service-oriented systems
- Incorporate user feedback

IFT-DSS Proof of Concept Objectives	IFT-DSS Version 0.1.0	IFT-DSS Version 0.2.0	IFT-DSS Version 0.3.0
Develop a framework to facilitate the fuels treatment decision support process a) Prescribed burn planning b) Strategic fuels treatment planning	✓	✓	✓
Provide an easily accessible and straightforward user interface	✓	✓	✓
Provide users with software model choices		✓	✓
Provide users with input data choices			✓
Support visualization of tabular and spatial data	✓	✓	✓
Support for the preparation of documentation	✓	✓	✓
Support for collaboration among users	✓	✓	✓
Support the integration of existing and new models	✓	✓	✓
Support for connection and interoperability with other systems		✓	✓
Incorporate user feedback during the development cycle		✓	✓

IFT-DSS Phase IV:

June 2010 – June 2012 (1 of 2)

- Continue community development effort
- Develop risk assessment work flow
- System implementation (2010-2011)
 - Refinement of work flow scenarios
 - Complete implementation of work flows:
 - Data acquisition and preparation
 - Strategic planning
 - Prescribed burn planning
 - Spatially explicit fuels treatment
 - Fuels treatment over time
- Transfer IFT-DSS v 1.0.0 to Forest Service

IFT-DSS Phase IV:

June 2010 – June 2012 (2 of 2)

- System administration training
- User training in coordination with Fuels Management Committee
- System implementation (2011-2012)
 - Risk assessment work flow
 - User-defined custom work flow
- Technology transfer
 - Transfer IFT-DSS v 2.0.0 to Forest Service (June 2012)

IFT-DSS Phase III May 2009 – May 2010

- The Software Tools and Systems Study – John Cissel
- Phase III Accomplishments – Tami Funk
- IFT-DSS version 0.3.0 Demonstration – Tami Funk
- IFT-DSS Phase IV – Tami Funk/John Cissel
- The Emerging Vision for Fire Software Systems - Mike Rauscher
- The Human Framework around IFT-DSS – Mike Rauscher
- Questions and Discussion

The Evolution of the System of Systems Vision

- Phase I (Apr 2007 – Mar 2008): Lessons from the SEI
 - Web-based, Service Oriented Frameworks are possible & desirable
 - Stakeholder communities must be part of the solution from the start
- Phase II (Apr 2008 – May 2009): Getting to know the problem
 - Learning about web-based, SOA framework systems (WFDSS, Bluesky, etc)
 - Getting to know users and developers and their problems & needs
- Phase III (Jun 2009 – May 2010): Clarifying the SoS Vision
 - Writing & First Year Implementation of a Communications Plan (Tim Swedberg)
 - Discussions with WFDSS, Bluesky, FERA FFA, Missoula framework developers
 - Discussions with Brad Harwood, John Noneman, Paul Schlobohm
 - Presentations to the NWCG Directors & acceptance of vision (John Cissel)
 - First meeting of System of Systems Working Group, Seattle, WA Mar 2, 2010
 - Vision expounded in scientific journal article by Reinhardt and Dickinson
- Phase IV (Jun 2010 – Sep 2012) Voluntary Implementation & POC

Vision for the Fuels Treatment Community (1 of 5)

Fuels treatment planners have a need and they use what they know

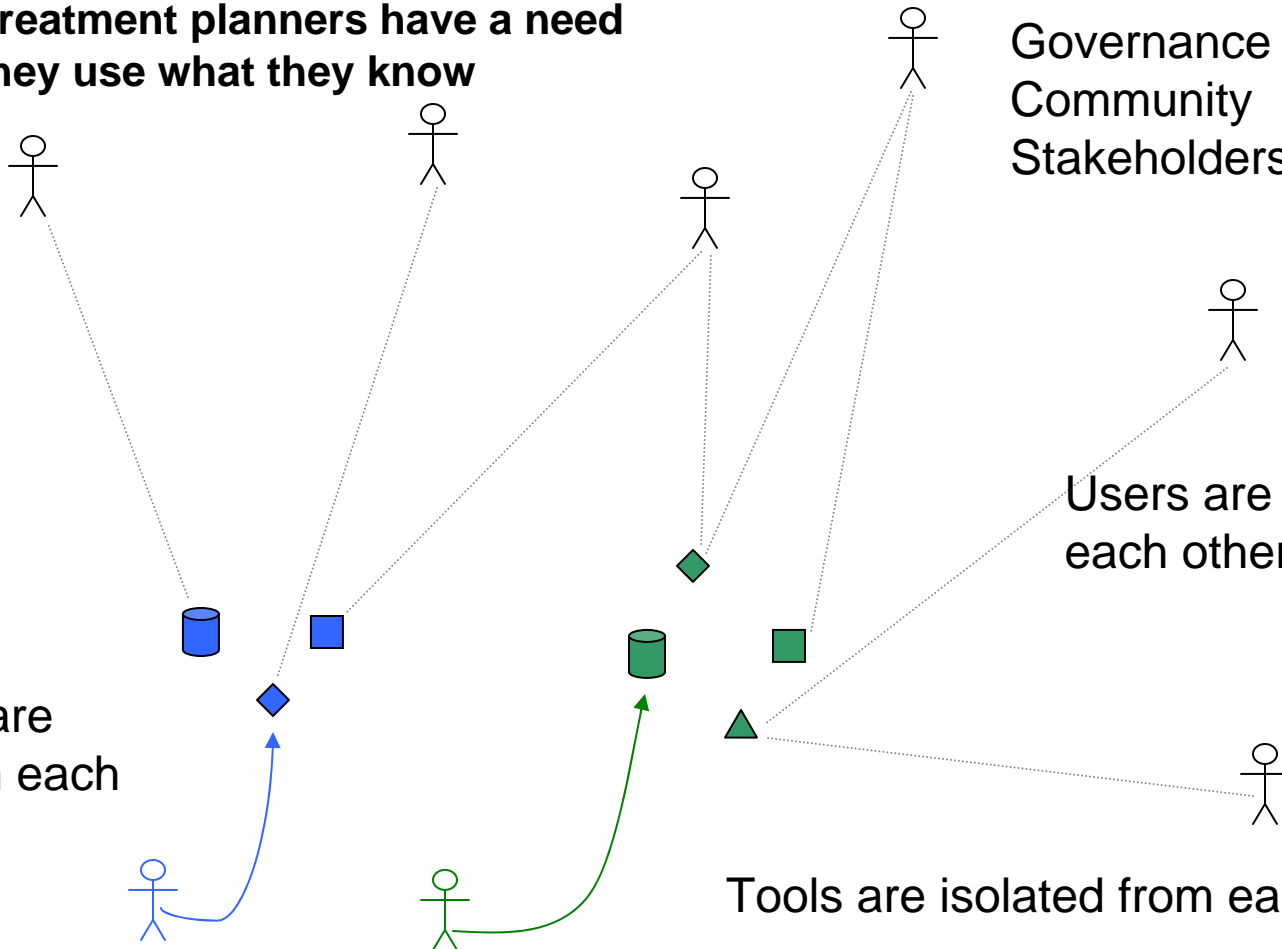

Governance & IT Community Stakeholders Missing

Users are isolated from each other

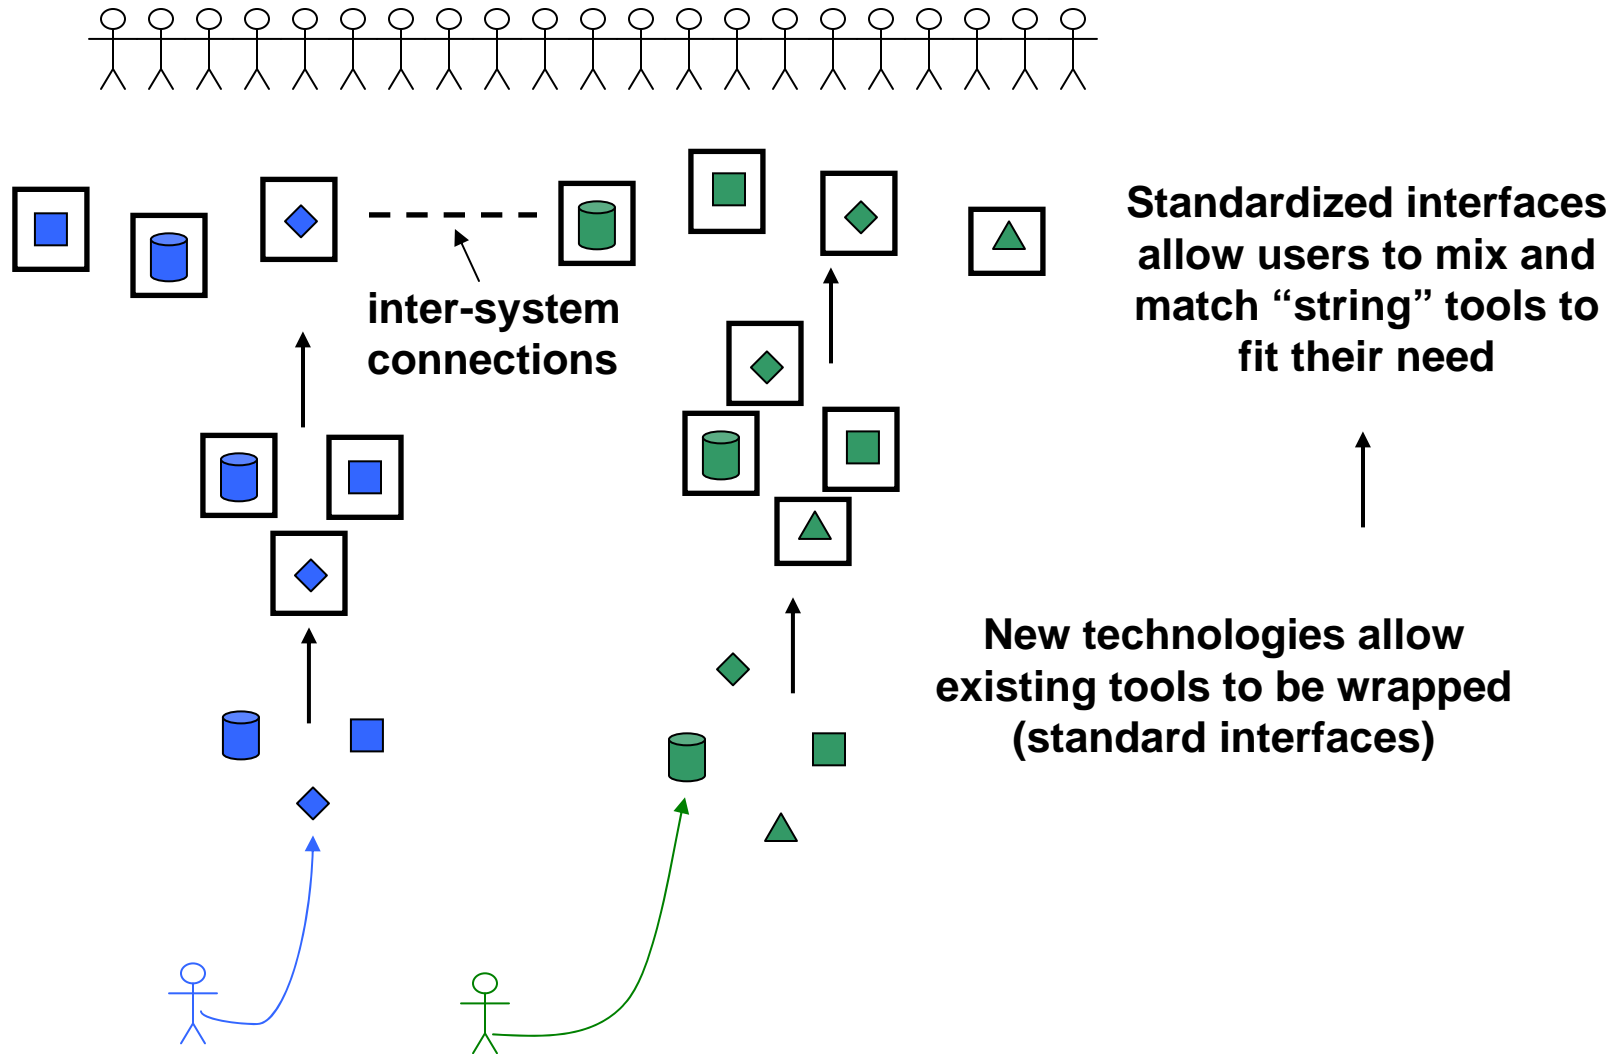

Tools are isolated from each other

Scientists and data providers create tools

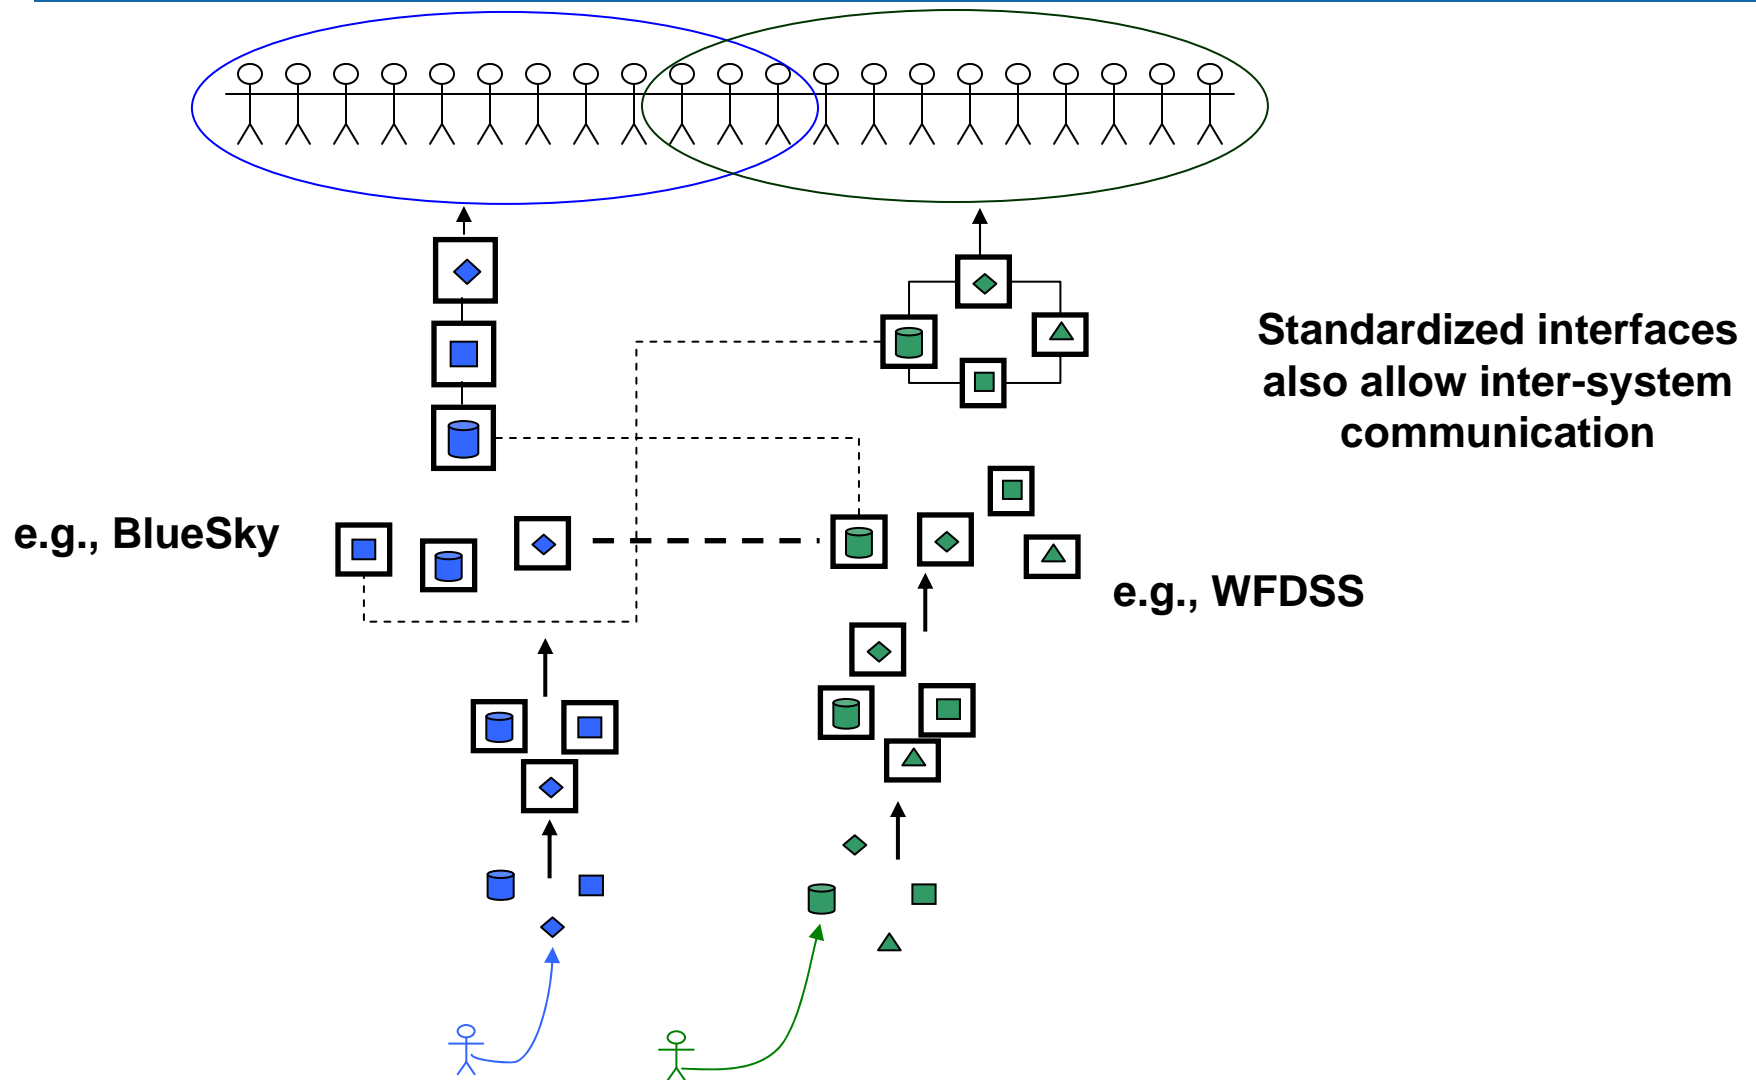

Developers are isolated from each other

Vision for the Fuels Treatment Community (3 of 5)

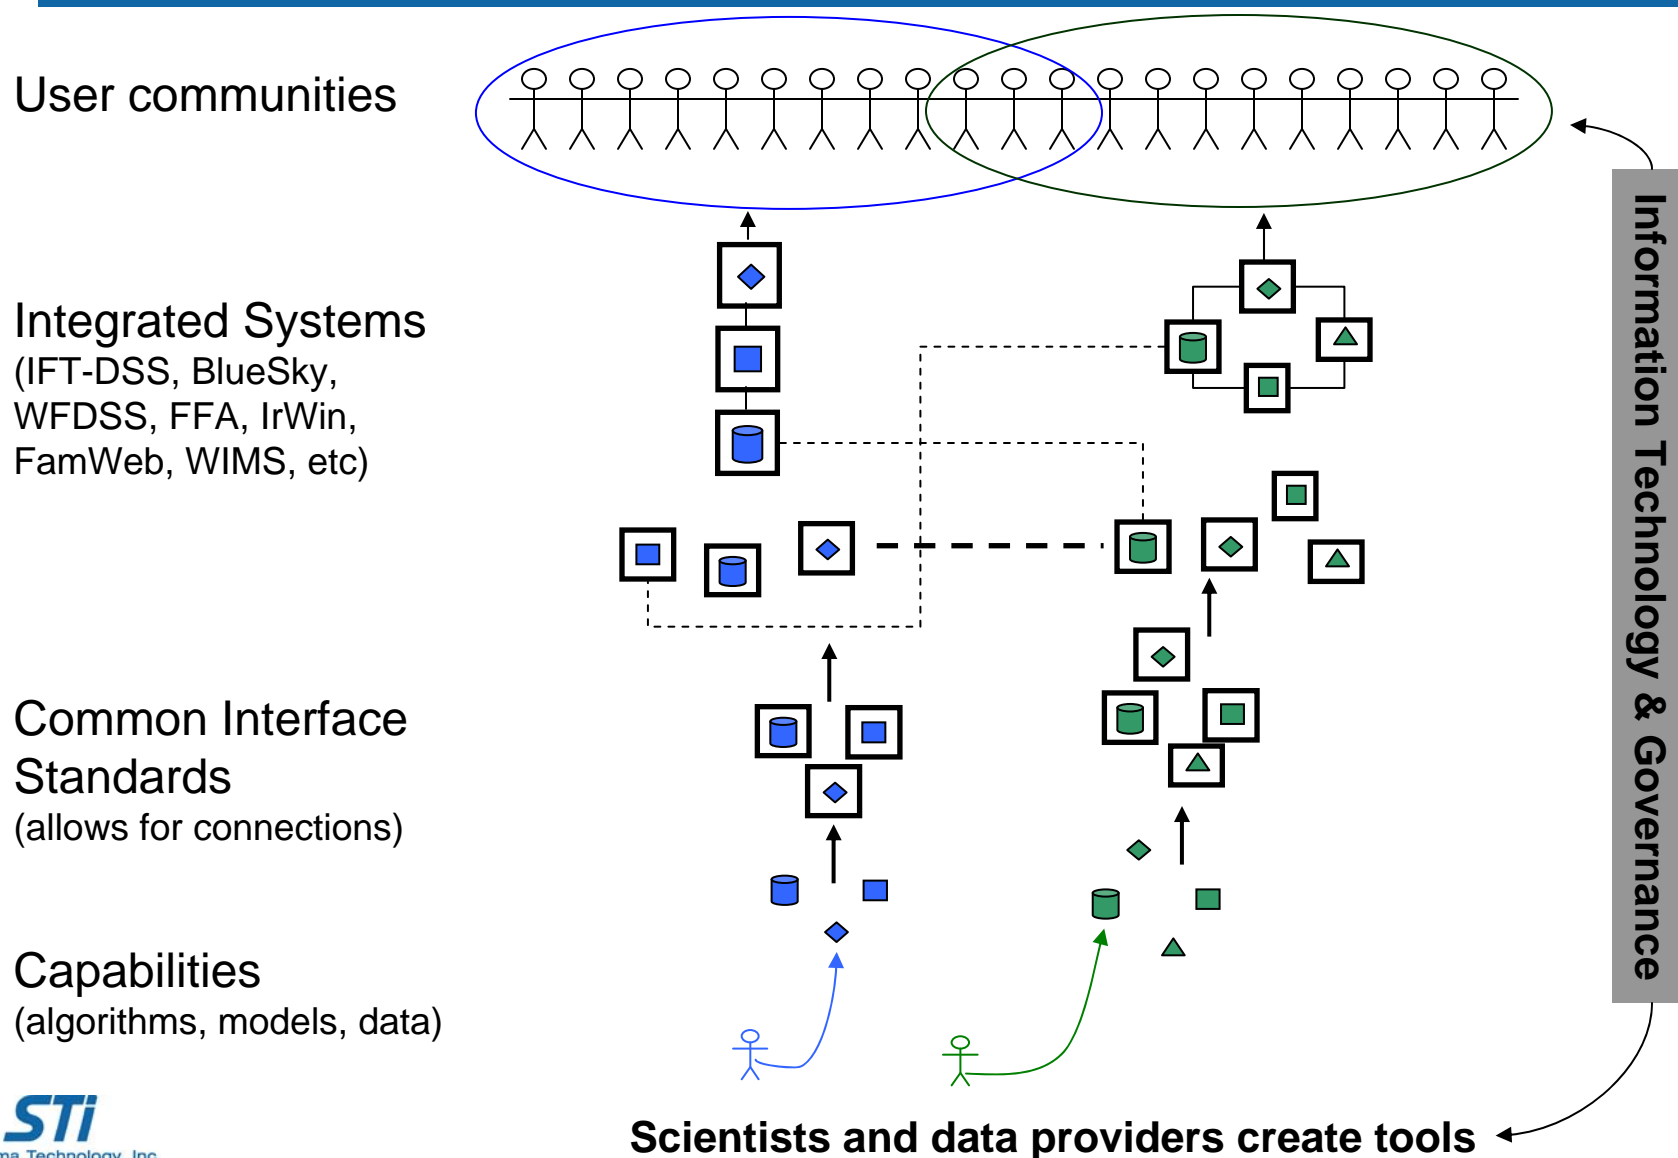

Vision for the Fuels Treatment Community (4 of 5)

Scientists and data providers create tools

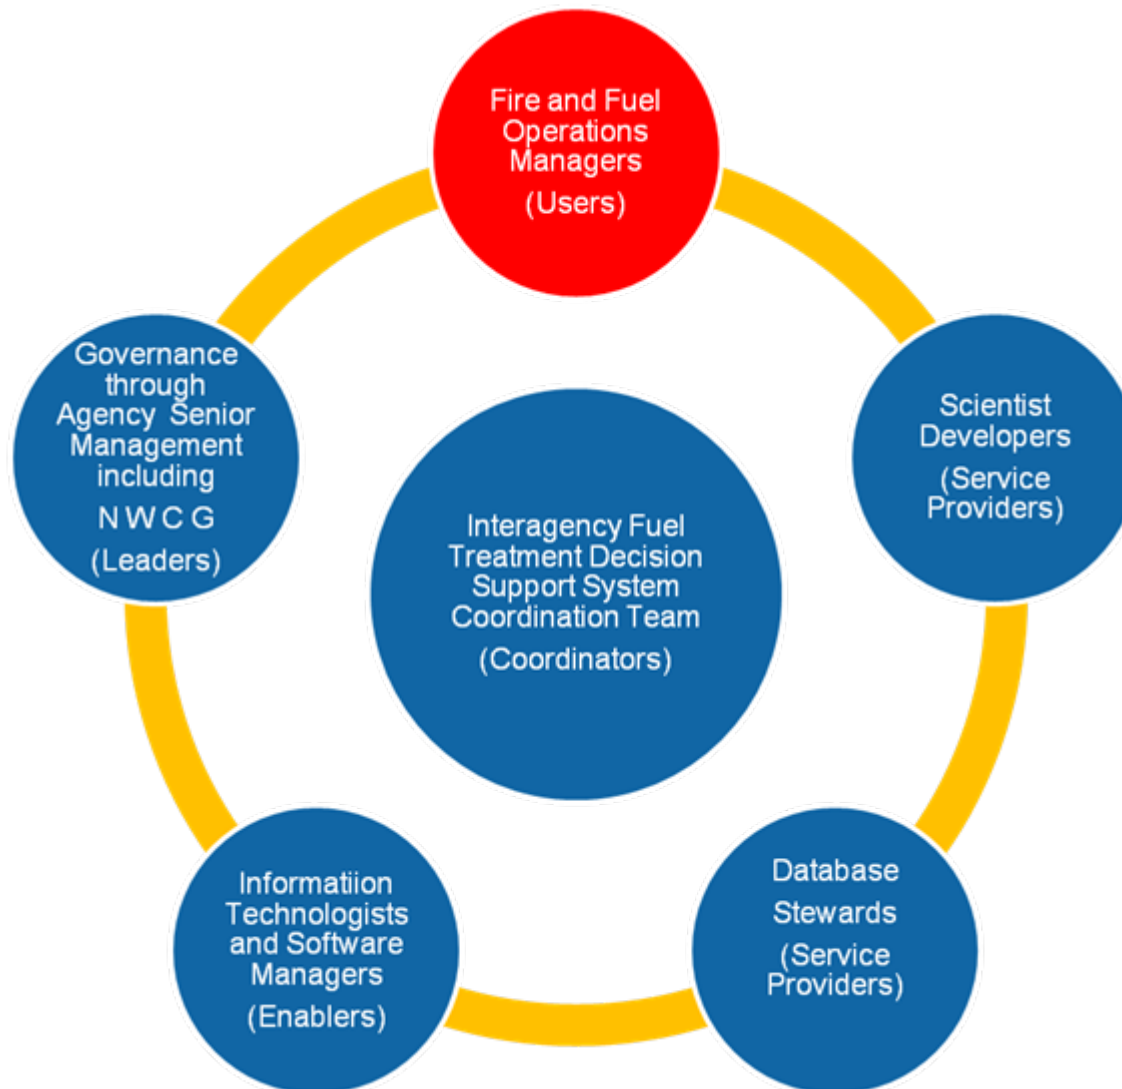

Vision for the Fuels Treatment Community

IFT-DSS Phase III May 2009 – May 2010

- The Software Tools and Systems Study – John Cissel
- Phase III Accomplishments – Tami Funk
- IFT-DSS version 0.3.0 Demonstration – Tami Funk
- IFT-DSS Phase IV – Tami Funk/John Cissel
