

# Alaska Fire Modeling and Analysis Committee GETTING STARTED in Fire Behavior Modeling.

## ALASKA FIRE MODELING AND ANALYSIS COMMITTEE

**Interested in Fire behavior modeling?** Not sure where to begin or who to contact? The Alaska Fire Modeling & Analysis Committee (FMAC) coordinates a network of analysts that provide mentoring and training to help develop fire behavior analysts in Alaska.

### Our website:

<http://www.frames.gov/partner-sites/afsc/partner-groups/fire-behavior-modeling-group/> is a great resource to help you get started. **Sign up** to become a Fire Behavior Specialist and we can match your skills with a mentor. Join us on an upcoming webinar or listen to past webinars posted on the site.

### Where to begin?

To start with you should try to get experience working in and around wildland fires, observing weather and fire behavior in different fuel types. (ie black spruce, tundra etc) . You should also be familiar with LANDFIRE, NFDRS and CFFDRS.

**New to the wildland fire decision making process?** The Wildland Fire Decision Support System (WFDSS) hosts the current fire behavior modeling platform to assist managers in making wildfire decisions. The site hosts a series of training aids for both the decision side of the software as well as the fire modeling. There are how to's, lessons and modules under the Training and Resource tabs that will help familiarize you with the process. The WFDSS Link is:

[https://wfdss.usgs.gov/wfdss/WFDSS\\_Training.shtml](https://wfdss.usgs.gov/wfdss/WFDSS_Training.shtml)

Landscape Fire and Resource management Planning Tools (LANDFIRE) is an interagency vegetation, fire and fuel characteristic mapping program. Learn more here: <http://www.landfire.gov/>

**National Fire Danger Rating System (NFDRS):**<http://www.nwcg.gov/pms/pubs/MasterGaining.pdf>

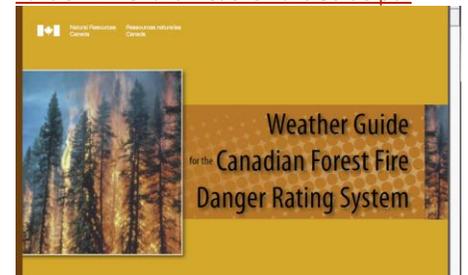

The fuel model guide to Alaska vegetation will serve as a good reference. <http://fire.ak.blm.gov/content/admin/awfcg-committees/Fuels,%20Prescribed%20Fire,%20and%20Community%20Assistance/e.%20Alaska%20Fuel%20Model%20Guidebook%20062008.pdf>

## TRAINING AND QUALIFICATIONS

Knowledge of Canadian Forest Fire Danger Rating System and Canadian Forest Fire Behavior Prediction (FBP) System.

## Recommended Training Classes

Fire behavior classes start with S190 and continue to S590. Most years spring training includes S290 and S390 in Alaska. Check out the Interagency Fire Training site for the latest schedule.

<http://www.nationalfiretraining.net/schedule/list>

- S190: Introduction to Fire Behavior
- S290: Intermediate Fire Behavior
- S390: Introduction to Wildland Fire Behavior Calculations
- S490: Advanced Fire Behavior Calculations
- S590: Advanced Fire Behavior Interpretation
- S491: Intermediate National Fire Danger Rating system
- S495: Geospatial Fire analysis, Interpretation and application.
