

Areas at Risk of Becoming Non-attainment Under the Revised Primary Ozone Standard of 0.070 ppm

Millions of new acres at risk of being in NAA (change from 2008 to new standard)

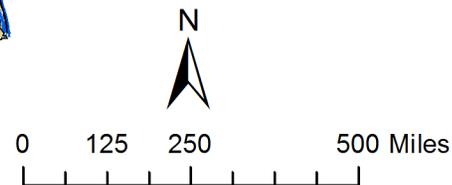

Forest	18.6
Shrub	55.7
Herbaceous	11.5
Sparse	13.5
Agriculture	8.3
Developed	3.9
Water	2.2
Snow&Ice	0.0
Total	113.9

NA Areas/Counties

-  2008 Standard (0.075 ppm)
-  New Standard (0.070 ppm)

Land Cover Type

-  Forest
-  Agriculture
-  Shrub
-  Developed
-  Herbaceous
- Water
- Sparse
- Snow & Ice

Map compiled by the USDA Forest Service, Fire Modeling Institute. October 13, 2015.

New potential non-attainment areas were identified as counties that exceeded the 0.070 ppm threshold using the three-year (2012-2014) average of the 4th highest 8-hour average for each monitoring site. Ozone data were retrieved from EPA's Air Quality System (AQS) and Clean Air Status and Trends Network (CASTNET). Non-attainment areas under the 2008 standard are from EPA (www3.epa.gov/airquality/greenbook). Land Cover data are from LANDFIRE 2012 Existing Vegetation Cover (www.landfire.gov).
